We build mutually beneficial

## RELATIONSHIPS

### COMPLIANCE TEST CENTER

Because every relationship we build is important to us, the accuracy, reliability and timeliness of our program services must be of the highest quality.

Northwest Tank's new **Compliance Test Center (CTC)** is an industry leading, proprietary software application that enables us to schedule, track and closely monitor

compliance testing for every client site. Using advanced technologies in a pro-active approach, CTC allows us to "guarantee compliance" for every location participating in the Compliance Maintenance program (contact us for details).

In addition to CTC, we provide user-friendly, online access to all test results through our own **Web Access Testing**

**Results** system (**WATR**). Available 24 hours-a-day, 7 days-a-week, WATR allows station owners to view, download and print their compliance schedule and test results instantly. Avoid fines during a surprise visit by a governing agency by producing compliance test results at the click of a mouse!

Contact Northwest Tank for additional information about the benefits of CTC and WATR.

## COMPLETE COMPLIANCE MANAGEMENT

Northwest Tank is proud to offer two programs to make **Compliance Management** of your station nearly effortless.

Station owners who participate in both Northwest Tank's **Compliance Test Program** and **Meter Calibration Program** receive immediate results and the following benefits as part of this full-service compliance package:

- **discounted rates for compliance testing and meter calibration during the contract term for multiple sites**
- **timely notice of all required and recurring testing with convenient scheduling**
- **quick test results delivered in a secure format via email or by standard mail**
- **customized, site-specific Operation & Maintenance Manual to ensure ongoing compliance success**

Contact Northwest Tank for additional information about the comprehensive **Compliance Management Program** and how you can benefit by partnering with the leader in station compliance management.

## COMPLIANCE TEST PROGRAM

Northwest Tank offers compliance testing for all underground storage tank systems, including:

- **Tank Tightness**
- **Line Tightness**
- **Automatic Line Leak Detectors**
- **Cathodic Protection**
- **Helium Leak Location**
- **Tank Monitor Certification**
- **Static Pressure Decay**
- **Air to Liquid Ratio**
- **Dynamic Back Pressure**
- **Blockage**
- **Stage I EVR Testing**
- **Healy Stage II Testing**
- **Compliance Audits**

All required testing includes a complimentary consultation with our skilled technicians. We are fully certified and licensed in Washington, Oregon, Idaho and Montana, where we maintain strong relationships with the governing agencies in order to further ensure proper compliance.

## METER CALIBRATION PROGRAM

Northwest Tank's Meter Calibration Program ensures that your meters are calibrated accurately to avoid giving away fuel or shorting the customer. Fully certified and licensed in Washington, Oregon, Idaho, California, Nevada and Arizona, our technicians will establish a meter calibration program for you as an important step toward complete fuel management.

A station owner can maximize profit margins by correcting costly meter errors early. Northwest Tank uses the most efficient equipment to duplicate the consumer fueling process, resulting in highly accurate meter calibration results. In addition, they create concise return on investment reports to provide a record of meter performance. Finally, customers want to know they are getting what they pay for. Simply seeing our technicians on site is an easy way to provide that assurance.

Trust Northwest Tank to apply their many years of experience and state-of-the-art equipment to calibrate your meters for accuracy and maximum profitability.
